REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The Applicant's invention relates to a system capable of determining if an originator of a message should be able to send a message based on the determined threshold delay.

If the expected delay is excessive, the message sender either does not send the message at all or waits until the expected delay has decreased. The Applicant claims:

Regarding **claim 1**, a message delivery method, comprising:

- determining whether an expected delay for delivery of an electronic message is less than a threshold delay, wherein the expected delay is the expected delay for delivery of an electronic message by a message gateway, wherein determining whether the expected delay is less than a threshold delay *includes receiving a delay report, and wherein the delay report indicates whether the expected delay exceeds a threshold delay*;
- *creating the electronic message only after determining that the expected delay is less than the threshold delay*; and sending the electronic message to the message gateway only after determining that the expected delay is less than the threshold delay.

The closest prior art relevant to the disclosure of the Applicant's invention is Hicks.

Hicks disclose a method to notify a mobile user of delays of a message (transaction) that the user wants to send. This delay determination is made based on a request from the user to the mobile station that he/she wants to originate a transaction. If the Delay timer within the mobile station is running, then the said transaction will not be

Art Unit: 2617

completed, and the delay is determined. Based on the delay time issued to the user, the said transaction may either be stored in the memory of the mobile station or discarded. Hicks further teach that a new transaction may be used to replace the queued transaction.

Although Hicks et al. is considered to constitute to the state of the claimed invention; however, in contrast with comparable differences, the instant Application is considered novel over Hicks because the instant application claims the determining the expected delay is less than a threshold delay ***includes receiving a delay report, and wherein the delay report indicates whether the expected delay exceeds a threshold delay and then creating the electronic message only after determining that the expected delay is less than the threshold delay.*** It is then whereby the message is sent only after determining that the expected delay is less than the threshold delay.
